SUMMARY

Full Stack Engineer with 3+ years building production systems at high-growth startups. Shipped IoT fleet tracking across 200+ vehicles, payment integrations, automated WhatsApp communication pipelines, and real time WebRTC systems, all tied directly to revenue and operational efficiency. Thrive in fast moving product teams where ownership and speed matter.

EXPERIENCE

Full Stack Developer

Home Mechanic

April 2025 - Present, Delhi

- Built a **WebRTC-powered live streaming** feature where technicians stream directly from the app to the customer's **WhatsApp**, giving customers **real-time visibility** into their service.
- Built an **automated customer communication pipeline** using **BullMQ** and **Redis**, delivering live WhatsApp updates, pre/post inspection reports, and invoices upon job completion, covering **500+ customers**.
- Integrated **Razorpay** to enable **end-to-end digital payments**, replacing manual collection across **1,000+ customers**.
- Built an **in-house CRM** from scratch, replacing **Excel-based lead tracking** and managing **500+ monthly leads** across the sales pipeline.

Software Developer

FuelBuddy

May 2023 - April 2025, Gurugram

- Built **delivery slot allocation APIs** that improved **scheduling efficiency by 25%**, increasing order fulfillment capacity while reducing operational costs.
- Engineered **bulk order automation** that processed **500+ orders in under 30 seconds**, supporting business growth without proportional increases in headcount.
- Developed **Node.js APIs** for **IoT fleet tracking** and telemetry processing across **200+ vehicles**, improving fleet visibility and utilization.
- Designed and shipped **Vue.js dashboards** integrated with **GraphQL APIs**, giving operations and sales teams better visibility into delivery performance.

PROJECT

DocMind - Multi PDF Research Assistant

doc-mind-multi-pdf-research-assista.vercel.app/ • May 2026 - June 2026

- Built DocMind, a multi-PDF research assistant using a **LangGraph RAG pipeline** with automatic **OCR** fallback for scanned documents, served via **FastAPI** and a **React/Vite** frontend.

15-Puzzle Game

main--15-puzzle-mystic-tiles.netlify.app/ • April 2024 - May 2024

- Built a **15-Puzzle game** using **React**, **TypeScript**, and **Vite**, implementing **solvability validation**, **shuffle generation**, and a **responsive UI**, and deployed it on **Netlify**.

EDUCATION

B.Tech in Computer Science and Technology

Jamia Hamdard University • New Delhi • 2024 • 8.48/10

SKILLS

Frontend: React.js, Vue.js, Next.js, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, GraphQL, Prisma, Hasura, WebRTC, JWT Authentication,, Redis, FastAPI, LangGraph

Databases & Infrastructure: PostgreSQL, Docker, DigitalOcean, CI/CD, GitHub Actions

Languages: JavaScript, TypeScript, Python
